

About gbo Medizintechnik AG

Medical Engineering "Made in Germany"

gbo has grown mostly as an OEM partner for SIEMENS and has developed and produced the major part of the SIEMENS Physical Therapy program. From this we derived not only a solid know-how in medical engineering but also our understanding of quality.

Based thereon we have

- systematically expanded our product portfolio in Physical Therapy towards medically innovative products
- developed and produced valuable products for our OEM customers
- expanded successfully into the market of cosmetic devices.

Our products are always in the upper quality segment. Their common characteristics are practical functionality, best ergonomic user interface and attractive design.

gbo Medizintechnik AG is a small to medium sized company that sells and services its products worldwide in over 70 countries.

Besides ultrasound, the high frequency technology belongs to the gbo technology portfolio. Here shortwave (27 MHz) and microwave devices (2.45 GHz) are being developed together with their respective applicators.

Of course all aspects of electrotherapy are in the center of our expertise. This concerns the generation of all forms of therapy, such as low frequency, medium frequency, interferential, and gbo's patented High Tone Therapy. Also important are suitable applicators with particularly low biocompatible silicones and suction applicators, both in classic form as well as by the Venturi principle.

gbo Medizintechnik AG has a documented Quality Management System and is certified according to EN ISO13485:2012 by TÜV Süd. And this is applicable all the way from development to production and to distribution. Even with registration in other countries, such as Japan, USA, Russia and others we have ample experience.
